# Mobile Client Launcher User Manual

Configuration

On first use, users will be prompted to configure the application.

The MEP version must be selected (Currently only supporting 7.x and 8.x) and the path to the Mobile Client application should be selected.
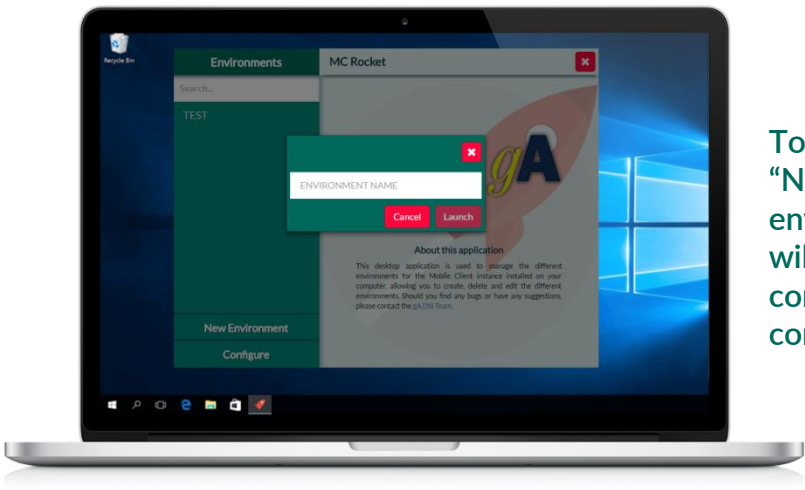

Should you need to run a different Mobile Client application or change MEP Versions, you can change the configured values using the "Configure" button.
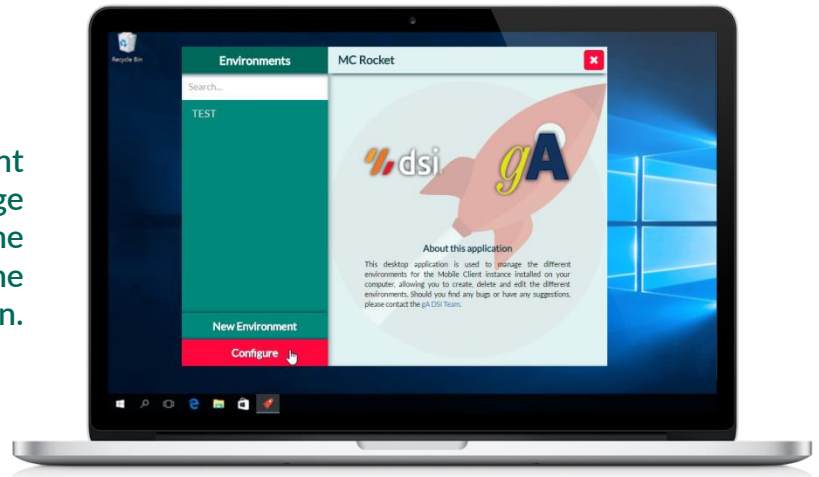

Note: *In order to use the application, the user* **MUST HAVE** *full control access of the C:\ProgramData\DSI folder.*
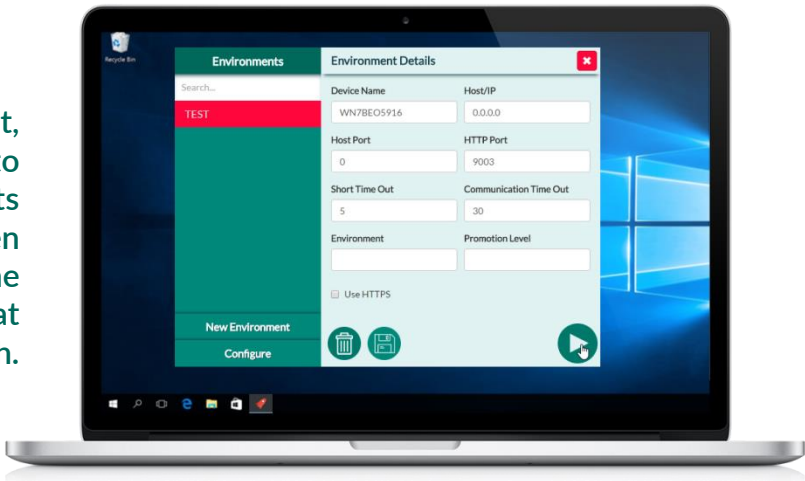

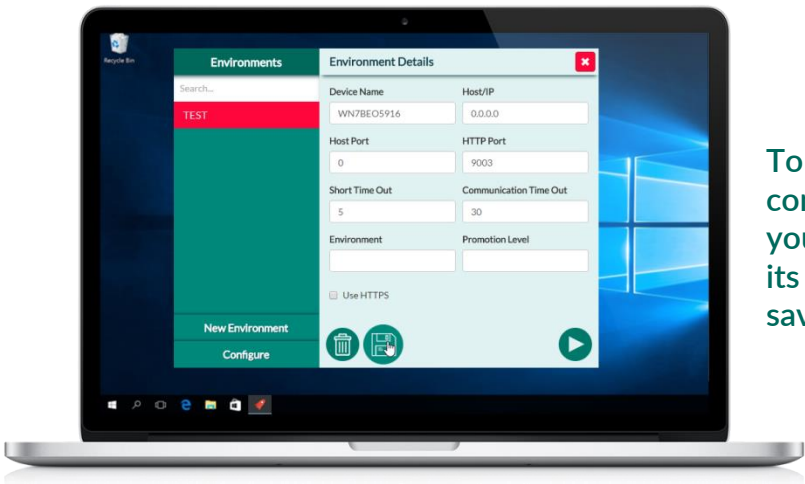

New Environment

To create a new environment, select "New Environment" and input the environment name. The Mobile Client will launch and will prompt you to complete with the environment's configurations.

Launch Environment

To launch an existing environment, select the environment you want to launch from the list, review its configurations are accurate, and then launch the environment. If you edit the configurations, these will be saved at launch.
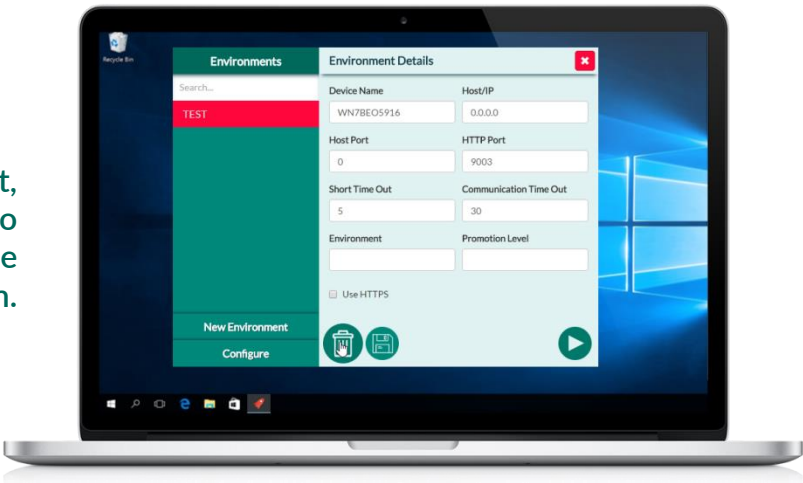

Edit Environment

To update an existing environment's configuration, select the environment you want to launch from the list, edit its configurations, and then click the save button.
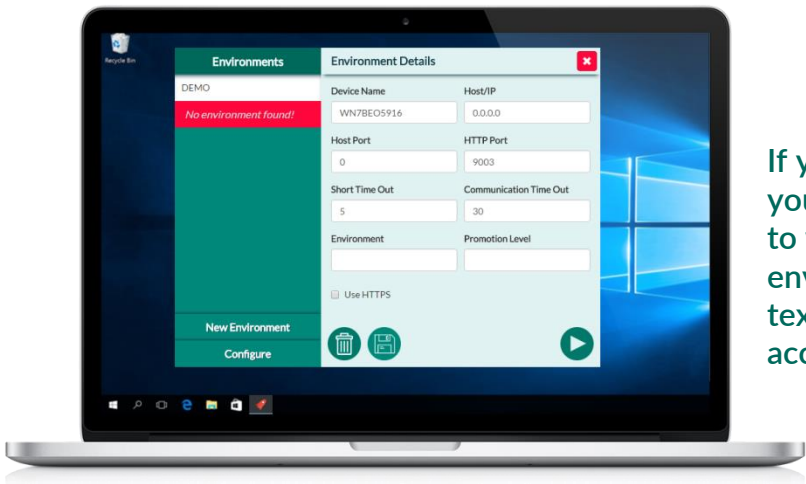

Delete Environment

To delete an existing environment, select the environment you want to delete from the list, and then click the delete button.

Search Environment

If you have many environments setup, you can search for the one you want to work with by name. Just tyoe en environment name in the white textbox, and results will be updated accordingly.

Mobile Client Running

While the Mobile Client is running, the application will prevent you from opening a new instance of the Mobile Client. The application will watch for the Mobile Client process every 30 seconds and if found running, it will open an overlay that will block the application behind it. This overlway will be closed once the Mobile Client is closed.

If you close the Mobile Client and the application has recently checked if its running, you can force the launcher to check if the Mobile Client has been closed using the Synchronize button.
